Roll no:05 & 08

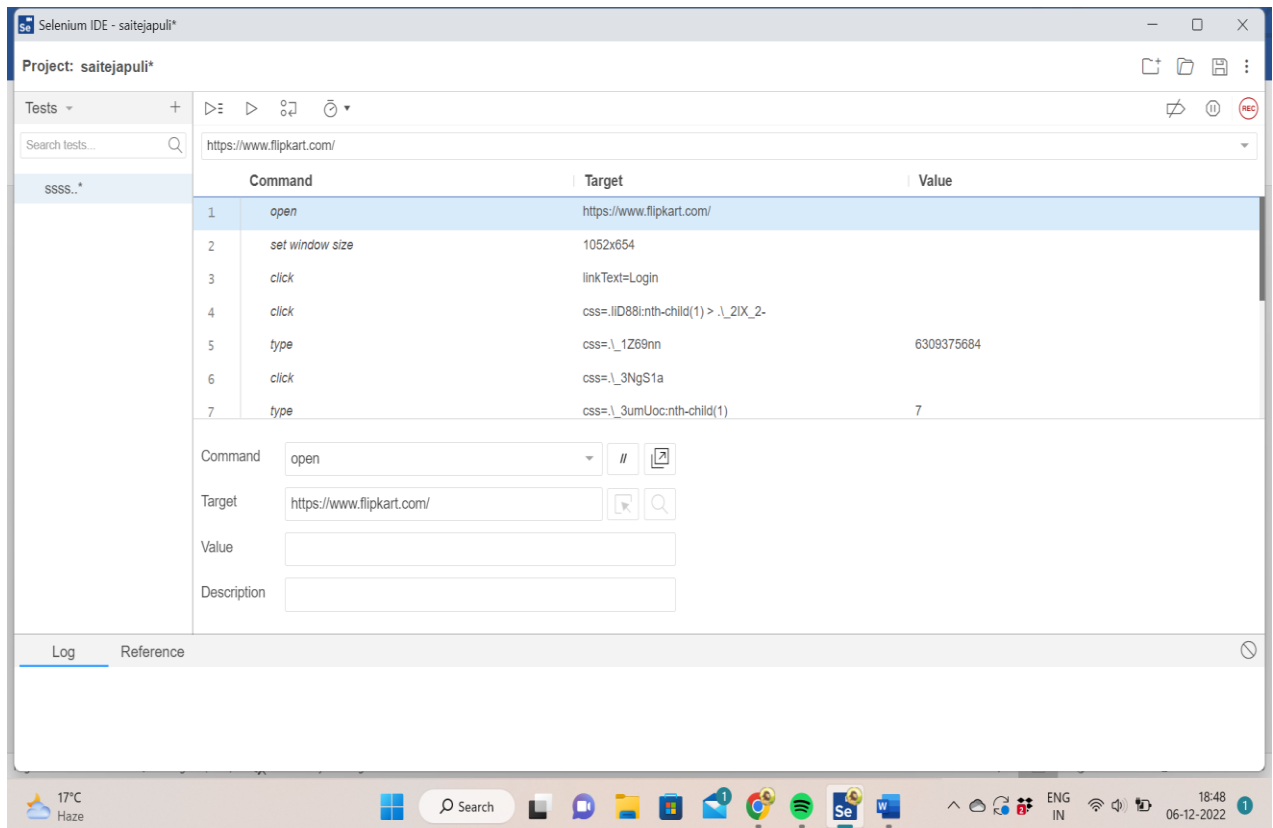

Software engineering selenium IDE:

Topic : selenium IDE of login scenario of flipkart website.

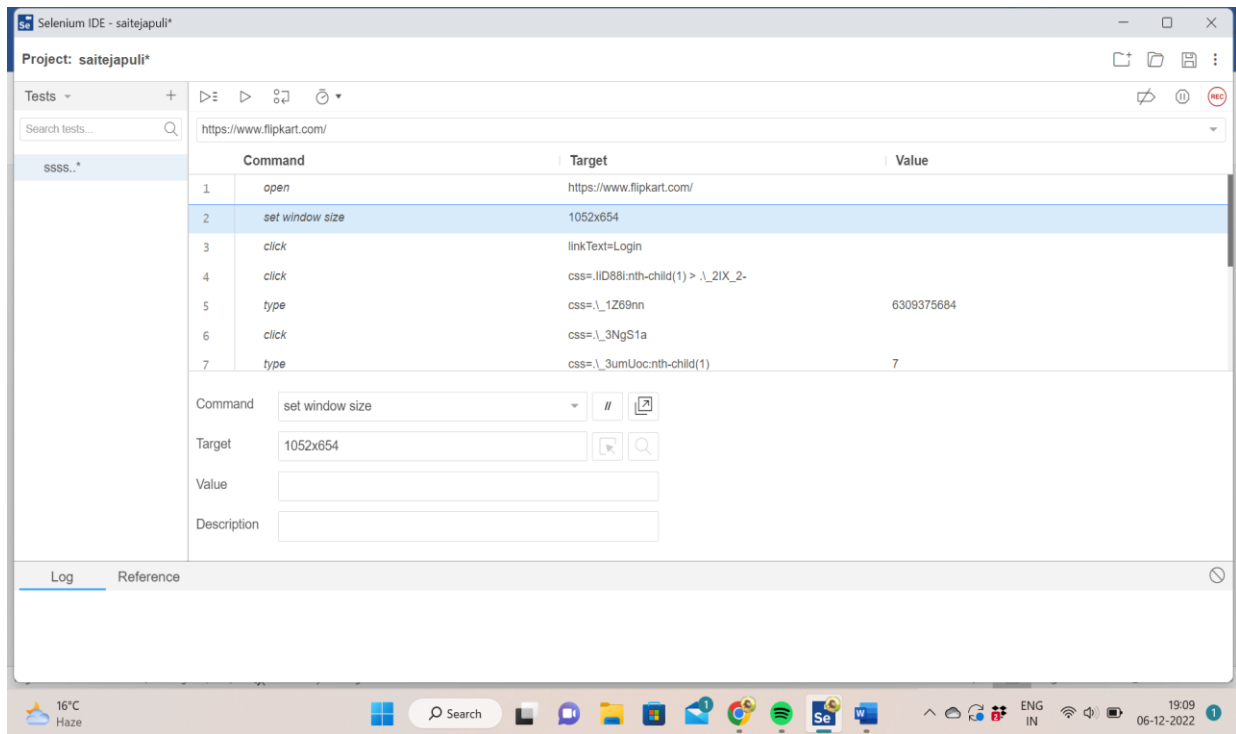

.Interface of flipkart login selenium IDE .

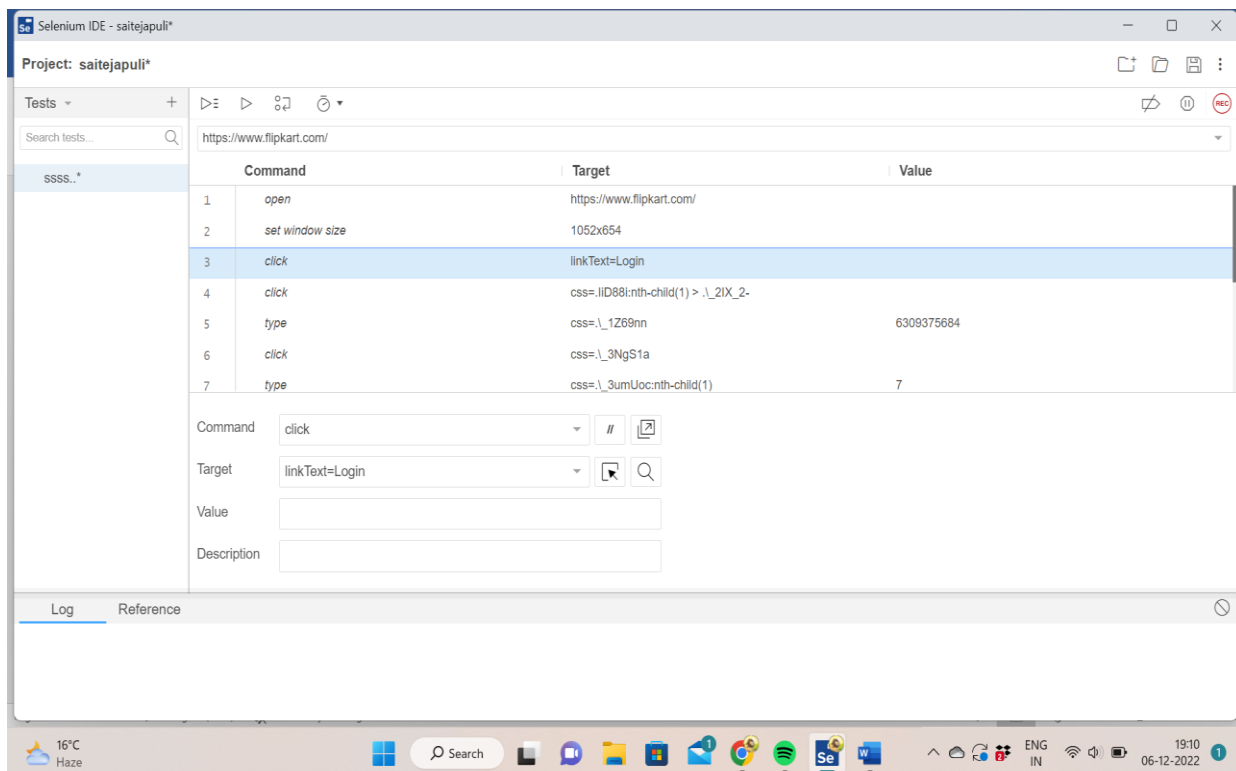

1.First command is “OPEN” and URL link will be updated in target checkbox automatically.
OPEN -it is most commonly used command in software testing tool and full URL input is taken.

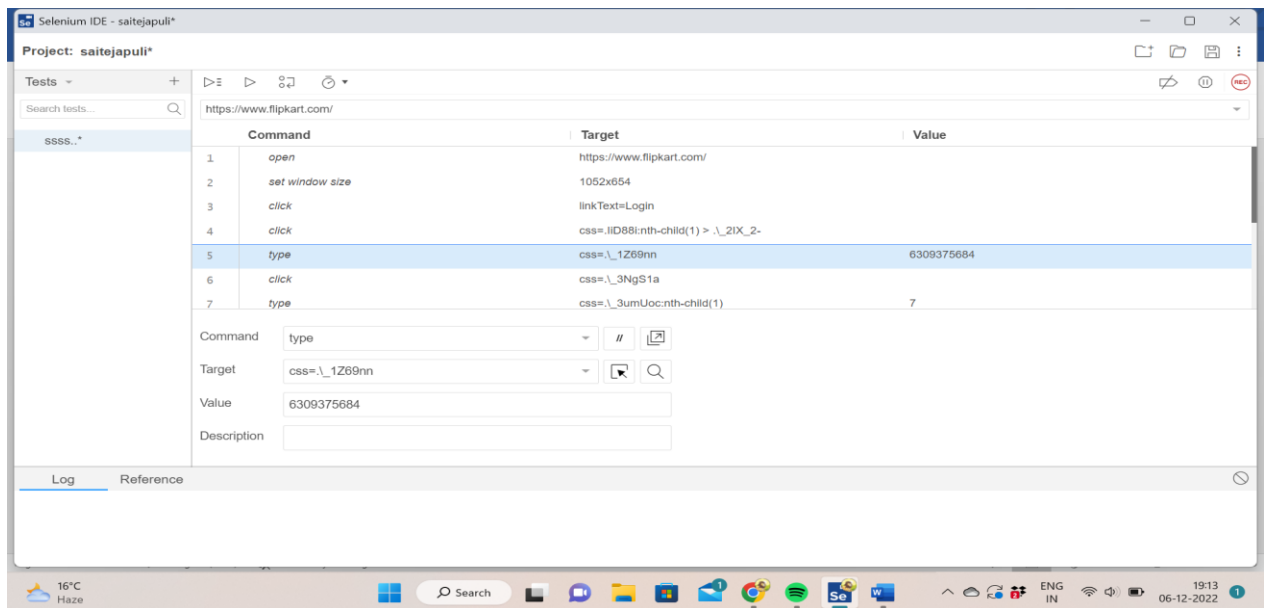

2. Second command is “WINDOW SIZE” .
Window size-to adjust or re-sizes browsers window mostly useful for web designers.

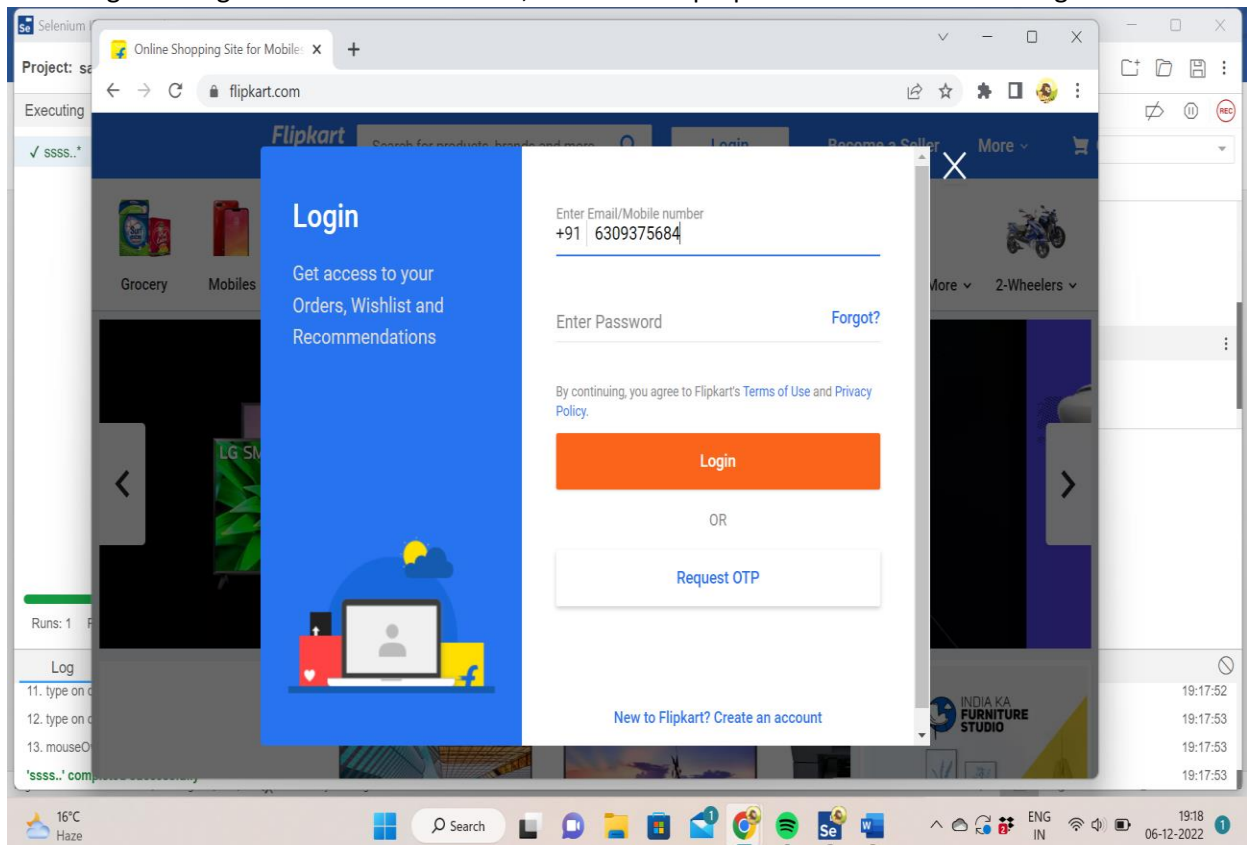

3.CLICK command used for mouse click operations for interactions such as links ,button,checkbox etc.

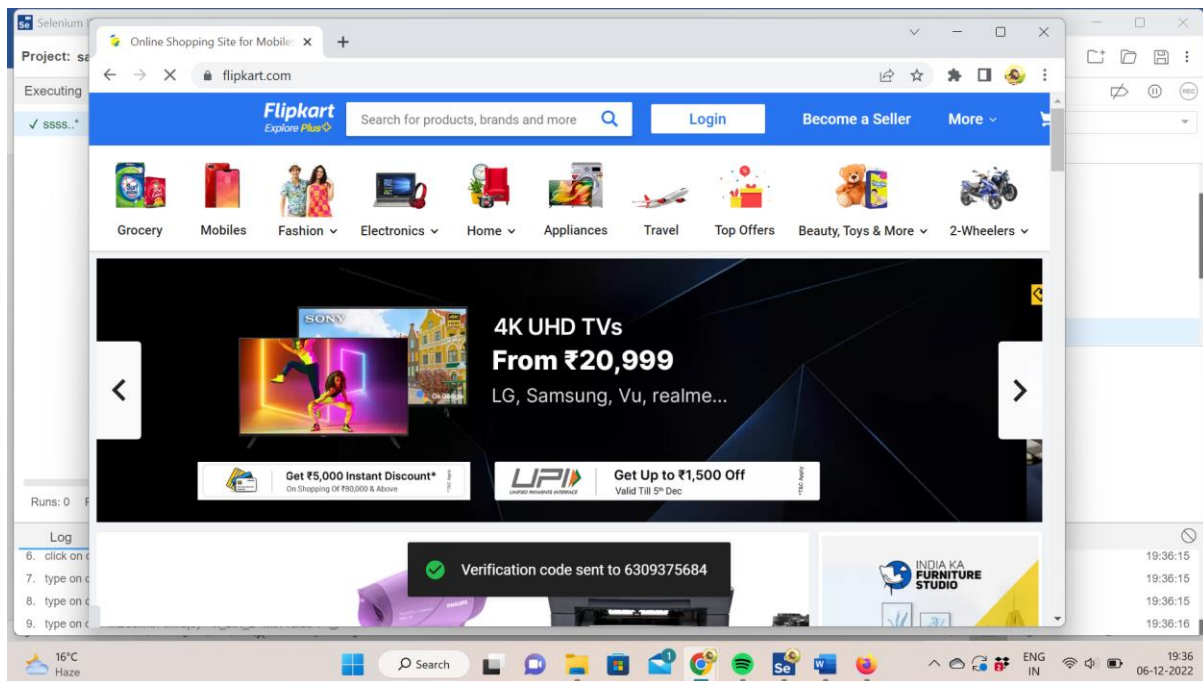

4. "TYPE" command shows login information such as my login number in below picture and in value checkbox as a variable.

5. Through clicking Run button in selenium ,selenium will prepare test run we have to login

Successfully logged in.

6. After login my result is successful .
